

Using ls like cd

<code>ls /</code>	This will list the files in your root directory
<code>ls ~</code>	This will list the files in your home directory
<code>ls ..</code>	This will list the files of your parent directory
<code>ls /home/user/Desktop</code>	Here we are using the absolute pathname to list the files that are present on user's Desktop. Put your username instead of user to see the files that are present on your desktop
<code>ls ~/Desktop</code>	Here we are using the relative pathname to list the files that are present on your Desktop.
