gedit

- Now it's time to learn how to view and edit text files.
- gedit is the default text editor for the Gnome Desktop Environment
- Example (Viewing a file)

  If you want to view an existing text file named file1

  gedit file1

  Will open up file1 for you and you can view it or edit it.
- Example (Creating a file)

  If you want to create a new text file named file2

  gedit file2

  Will create file2 and you can start adding text to it.
- gedit is very simple to use and is also pretty self-explanatory
